

The MDClone ADAMS Platform

An All-in-One Solution

MDCLONE

The MDClone ADAMS Platform

A fundamentally different approach
to unlocking healthcare data.

The MDClone ADAMS Platform is a powerful, self-service data analytics environment enabling healthcare collaboration, research, and innovation.

THE CHALLENGE

Data is everywhere. Insights are hard to find.

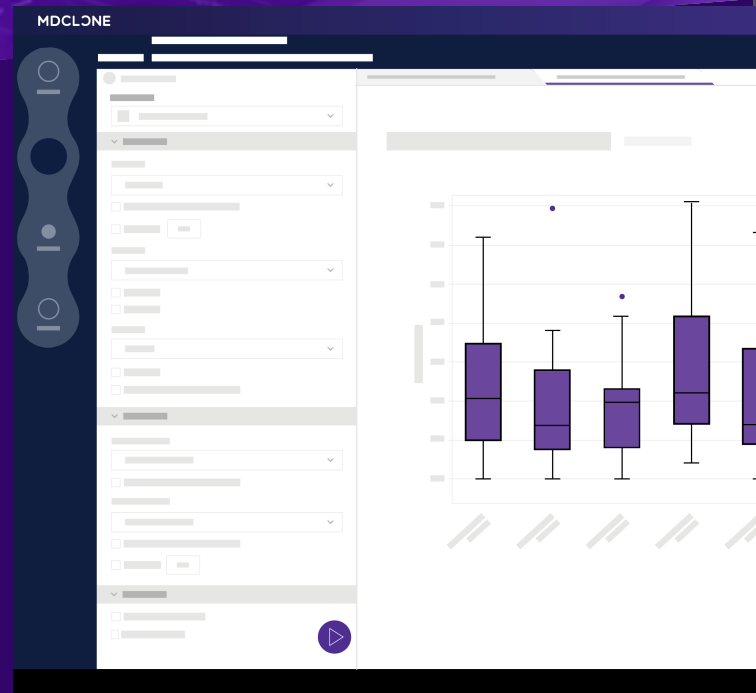

Navigating data in a health system can be challenging, expensive, and time consuming. Answering simple questions can take months or longer due to siloed systems, complex data models, unstructured data, privacy regulations, and limited support from IT and data teams.

Fast Access to Dynamic Data Exploration, Analysis, and Action

Unlike traditional analytics platforms, the MDClone ADAMS Platform is the only environment that enables a dynamic and fluid process for data exploration, analysis, and action by any user on your healthcare team.

The rapid cycle of idea-to-data-to-insight enables healthcare organizations to ask for information, discover insights, act on new understandings, measure performance, and share ideas around the world to improve patient health and outcomes.

- + Independent self-service discovery
- + Interact with all patient data from any source
- + Leverage structureless data
- + Collaborate freely using synthetic data

Technology Differentiators

With MDClone's unique underlying technology, healthcare organizations can leverage ideas from across the entire ecosystem, overcoming common obstacles hindering research, innovation, and collaboration.

KEY PLATFORM CAPABILITIES:

- + Longitudinal data organization
- + Synthetic data generator
- + Natural language processing engine
- + Continuous data feed ingestion
- + Integrated 3rd party analytics tools
- + User-friendly interface

MDClone's ADAMS platform overcomes the biggest obstacles facing healthcare data analysis:

Balancing patient privacy and data utilization.

With an infinite number of ways for patients to be at-risk for poor (and costly) outcomes, understanding the care path for a specific population is of high value to any healthcare organization.

MDClone provides on-demand vision to the path-of-care for any population of interest without the need for a pre-defined process, dramatically increasing the ability to use data to drive innovation across the health system.

The rapid cycle of idea-to-data-to-insight using MDClone enables health organizations to ask, discover, act, measure, and share significantly more information than before to optimize operations for improved patient care, lower costs, accelerated research, and instant, secure collaboration.

A Model for Continuous Learning, Performance, and Innovation

What if you could:

- + Realize in minutes versus months how to enable continuous learning and improvement?
- + Enable any user to ask any question, to explore data without barriers, and take action?
- + Gain access to any population of interest without the need for an expert, data team, or a predefined process?
- + Dramatically increase the use of data both inside and outside of your organization?

Ask - ORGANIZE THE DATA

- Include all data elements
- Continuously add new data elements
- Accessible by any user of the healthcare system

Discover - EXPLORE THE DATA

- Explore without programming skills
- Find insights, within minutes
- Interact with data elements dynamically

Act - IMPLEMENT CHANGE

- Educate teams of discoveries
- Implement new protocols based on data
- Improve clinical workflows

Measure - VISUALIZE IMPACTS

- Visualize discoveries with ease
- Measure KPIs and monitor progress

Share - COLLABORATE WORLDWIDE

- Leverage synthetic data
- Collaborate with external organizations

Discover Dynamic Data Exploration for Your Healthcare Teams

Unlock a fast, non-linear process for healthcare data exploration. Empower your teams to take action to improve patient care, operational processes, and more.

- + 2021 and 2022 Best Healthcare Big Data Platform Award by MedTech Breakthrough
- + 2021 Technology Pioneer by World Economic Forum
